Even though the U.S. is in conflict with Iran, Trump chooses not to call it a “war” because that would normally require approval from Congress.

The conflict between the United States and Iran has raised important legal and political questions. President Donald Trump has chosen not to describe the situation as a “war,” even though military actions are taking place. This decision is mainly based on the structure of the U.S. government.

According to the Constitution, only Congress has the authority to officially declare war. While the president is the commander-in-chief of

the military, calling a conflict a “war” can increase pressure to seek congressional approval. By avoiding this term and instead using phrases like “military operation” or “limited strikes,” the president can continue military actions without formally asking Congress for permission.

This situation has led to disagreement between the president and lawmakers. Some members of Congress argue that the ongoing conflict is effectively a war and should require their authorization. Others support the president’s ability to act quickly without waiting for approval.

Overall, the debate highlights the ongoing tension between presidential power and congressional authority in matters of war and military action.
